

CDMA Network Services

KORE Telematics, the M2M Specialists, provides you with the easiest, fastest path to CDMA service revenues. KORE quickly and cost effectively delivers the right combination of CDMA network and value-added services, pricing, packaging and support.

KORE DELIVERS...

- North American CDMA Network Services:
 - EV-DO
 - 1xRTT
 - Fall-Back Compatibility
- IP Address Choices: Public, Private, Static, Dynamic
- Broadest Coverage, Best Performance over the Largest, Most Reliable CDMA Network
- High Availability via Redundant, Geographically-Dispersed Data Centers
- 'One Rate' Plan for North America, including Canada & Mexico
- Optimized US National Plan for Domestic Service
- 'One Stop' CDMA Device Accreditation Service
- Integrated CDMA & GSM Dual Mode Support
- Volume Pricing for all Network Use
- 120+ CDMA Devices KORE 'Network Approved'

Ideal for IP data applications that benefit from ease of integration into existing IT and mission critical systems with public, private and secure IP networking options – KORE CDMA network services provide superior coverage, reliability and manageability for M2M, enterprise and government applications.

Whether you need 1xRTT for lower bandwidth services such as vehicle/asset tracking, personnel and patient monitoring, or EV-DO for high bandwidth video surveillance or high volume Smart Grid and AMI deployments – KORE CDMA network services have been designed specifically to address the most demanding M2M application needs.

If you are challenged with getting a new solution to market, dissatisfied with legacy or non-standard CDMA services, finding it difficult to get Tier 1 support, or frustrated getting your CDMA device approved, KORE has the solution. From competitive pricing, to flexible agreements, to fast and effective on-boarding, KORE stands ready to help.

M2M Wireless Networks,
It's All We Do!

Who benefits from KORE Services?

A growing number of companies benefit from KORE network services every day. KORE services deliver solutions for applications as diverse as:

- Residential and Commercial Security
- Automated Vehicle Location (AVL) and Tracking
- Law Enforcement Tracking and Surveillance
- Local, Regional and Long-haul Fleet Management
- Personal and Pet Location and Tracking
- Remote Asset Management (Fixed & Mobile)
- Telemetry, Sensory and Monitoring Systems
- Advanced Meter Infrastructure (AMI)

Applications currently running on the KORE network range from low data (less than 100 KB monthly) to high throughput (50 MB and beyond) advanced applications. Both fixed and mobile solutions are delivered using CDMA, or any combination of GSM and CDMA for hybrid and international solutions.

What are the major benefits of CDMA network services from KORE?

KORE Telematics is your partner in delivering M2M solutions that minimize Total Cost of Ownership over the life cycle of your application. KORE invested in all the 'extras' necessary for a flexible and reliable 24/7 M2M network service to power your application so you can design, develop and launch the best M2M solutions quickly, cost effectively and with the highest confidence.

Adding Voice for enhanced service

Many M2M applications can be enhanced with occasional use voice capability, such as residential alarms, ambulance telematics or offender control. KORE voice services were developed with these needs in mind — cost effectively delivering secure one-way or dialable two-way options that save you money. You pay only for what you use — and the services are free of tax or regulatory charges.

Our Feature	Your Benefit
'One Rate' CDMA services, across all of North America.	Single, optimized tariff across US, Canada & Mexico — fixed or mobile — never increased by 'roaming' charges where devices are activated or located.
US National, Canadian or Mexican CDMA Services for fixed & mobile.	Intelligently priced plans that minimize cost for devices that do not need 'cross-border' roaming.
KORE suite of pooled (aggregated over multiple devices) and packaged (per MB) plans.	The lowest actual costs for data usage, consistently — further enhanced by the lowest rounding in the industry.
KORE PRISMPro for real-time network and performance management.	Lowest staffing and time costs to activate/control your application, comprehensive suite of capabilities, tools and reports. Scalable API for automated and high volume enterprise integration.
KORE PRISMPro suite of threshold monitoring and alarming capabilities.	Real costs from unmanaged or defective devices, or unanticipated usage — that can cause unexpected cost — are all but eliminated.
KORE is 100% M2M network services focused. No other activities or distractions.	KORE is your partner, not your competition — with dedicated support by our team of M2M & wireless experts.
KORE proven highest network availability and reliability.	Maximum availability — exceeding all competitors and consistently above industry standards — maximizes your M2M application success.
KORE streamlined services for application validation, Tier 1 device certification and remote device provisioning.	Industry-first streamlined validation, device certification and remote device provisioning services save you both time and money.
KORE CDMA & GSM services offerings available under a single commercial agreement.	Eliminates time and effort to negotiate multiple contracts — increased savings with combined volume discounts — single point-of-contact for support and troubleshooting — with one contract for all devices.
